

**DEPARTMENT OF THE AIR FORCE
86TH AIRLIFT WING (USAFE)**

19 September 2019

MEMORANDUM FOR HEADQUARTERS AZORES AIR ZONE

FROM: 65 ABG/CC

SUBJECT: Lajes Field Follow-Up Water Sampling Results

1. In the spirit of mutual cooperation and security, this letter is to inform you that the Bromate levels from the August 2019 water sample results are well below the Final Governing Standards-Portugal (FGS-P) criteria of 0.01 mg/l. A public affairs release is being prepared by 86 AW/PA and once complete, I will inform 65 ABG personnel of the testing results. I have attached the Memorandum provided by 86 AMDS and Report of Laboratory Analysis for your review and consideration. In order to ensure continued compliance with the FGS-P, 86 AMDS Bioenvironmental Engineering flight will continue to periodically sample the water.

2. If you have any questions or concerns, please contact the Political Affairs Liaison at 535-5228.

BETH D. GRABORITZ, Colonel, USAF
Commander, 65th Air Base Group
